## Water Shower Enclosures

Manufactured from specially compounded thermoplastic materials, BNL bearings minimise water absorption, are chemical resistant and give exceptionally good wear properties, making them ideal for applications such as shower doors and enclosures.

In addition, our twin-shot technology allows over-moulded wheels to be incorporated into our custom designs to dramatically reduce noise and result in a smooth and silent movement.

1. fully adjustable pivot assembly for curved shower door, incorporating three twin-shot moulded wheels and plated cap
2. height adjustable shower door wheel assembly
3. shower door runner assembly incorporating spring-loaded height adjuster wheel with splined edge for easy thumb adjustment
4. bi-fold shower door bearing incorporating integrated support arms to aid smooth operation and prevent door jumping out of the track
5. full complement bearing assembly incorporating twin-wheel bogie and pivot feature for a double sliding door quadrant shower cubicle
6. double bearing and integrated bracket with stainless steel support spindle for fully adjustable shower door runner unit
